Scott,

Class I UIC wells can be permitted for hazardous waste or for general waste disposal. Since Class II wells can only handle material that came from the hole (or water for enhanced oil recovery), Class I wells are used for disposal of other wastestreams as well as downhole material. Currently, there are no Class I wells in Alaska permitted to dispose of hazardous wastes.

Hanh:

Thanks for send this. It will be helpful. I have one question about the UIC discussion. The document mentions a number of Class I wells. In my limited understanding of the UIC program (mostly from slide OGWDW supplied for talks), I thought that Class I wells were for hazardous municipal and industrial waste. And, I'm a bit surprised to see Class I wells on platforms given the exemption of E&P waste from being hazardous. Could you help me understand how those are relevant to oil and gas and why there are Class I wells on platforms?

Hello Ahmar,

Attached are the responses to your questions 1-4, courtesy of Tim Mayers and Cindi Godsey from our Alaska Operations Office. Please take a look and let us know if you have any input. We are looking forward to the conversation with AOGCC next week.

Hanh
